

ISO/IEC JTC1/SC22/WG5 N1315

Japan's National Activity Report to ISO/IEC JTC1/SC22/WG5 Trollhättan, 8-12 June, 1998

IPSI/ITSCJ SC22/Fortran WG now has 13 members from computer manufacturers, system integrators and universities, and meets once every month.

Japan voted for all the two DTR ballots and the FCD ballot on CoCo.

JIS X 3001-2:1998 (Varying Length Character String) was published in March, 1998. It is a complete translation of ISO/IEC 1539-2:1994.

We finished the translation of the Fortran 95 standard into Japanese. It will be published as a revision by the end of 1998. Its technical content is identical with ISO/IEC 1539-1:1997.

We found about 30 questionable points in Fortran 95 during the revision work, and will report them after a review in the local WG, when the maintenance procedure is resumed.
