

ISO/IEC JTC1/SC22/WG5 **N1341**

US National Body Report - May 1999

X3J3 met mostly according to its customary quarterly schedule. Meetings were located in Las Vegas, Maui, and Oxford.

Last year we reported:

Due to a combination of delays in F95 processing, technical report processing, and thorny F2K issues, interpretation processing was largely put on hold; it is expected that this work will resume in earnest shortly.

However, interpretation processing is still on hold.

The status of the various work items is detailed in the Primary Development Body's status report.

Participation continues to be light. Despite concentrating exclusively on F2K projects, the work is not complete. To be realistic there is probably at least a year's more work to be done than is currently scheduled.
